TOXSYS is a truly comprehensive, toxicological information system, coupled with computational analysis for prediction of toxic effects of compounds. It is designed to provide a wealth of information and easy-to-use analysis tools for a variety of professionals, including toxicologists, environmental and food scientists, health and safety regulators, medicinal, cosmetic, and fragrance chemists, and chemical safety professionals.

TOXSYS is a continuity product, with major new topics, subject areas, and analysis routines added semi-annually in various areas of environmental health and science. The core of the information system contains a wealth of toxicological information on over 230,000 compounds, with exhaustive literature references on these compounds, as well as a compendium of data on a variety of toxic effects, such as toxicity, carcinogenicity, mutagenicity, and chronic effects. All data is structured for ease of access. In addition, a large endocrine disruptor sub-database gives exhaustive results on a wide range of studies on the effects of these disruptors.
