The Cisco Networking Academy course on CCNA Security provides a next step for students who want to expand their CCNA-level skill set to prepare for a career in network security. The CCNA Security course also prepares students for the Implementing Cisco IOS Network Security (IINS) certification exam (640-554), which leads to the CCNA Security certification.

The CCNA Security Lab Manual provides you with all 16 labs from the course designed as hands-on practice to master the knowledge and skills needed to prepare for entry-level security specialist careers. All the hands-on labs in the course can be completed on actual physical equipment or in conjunction with the NDG NETLAB+® solution. For current information on labs compatible with NETLAB+ go to <http://www.netdevgroup.com/content/cnap/>.

I bought this book to build a lab to learn about Cisco Switch Configuration. I did not pay attention to the title and purchased this one, but it was a pleasant surprise. Even-though this is far to advanced for me, I was able to learn terminology about network security. After I get comfortable with switch configuration and routing, I will definitely start on the security aspect.

At first I was a little upset because the book is word for word the same as the previous version, besides using CCP, but with over 100 pages of ASA labs I was pleased to buy the book. ASA is pretty much CCNA Security and knowing SDM, ASDM, CCP is big. Its nice to have pages over digital too because I can make notes on the sheets. This is one you can keep in your library and the author describes the labs enough for you to know what you are doing. I suggest either buying a stack or configuring GNS3. ASA 5505 is the main one used in the ASA labs and you can get one for about 200 on ebay or just spend some time configuring one with an ASA image in GNS3. Good luck!
