Members of Aboriginal, Torres Strait Islander and Maori communities are advised that this catalogue contains names and images of deceased people. All users of the catalogue should also be aware that certain words, terms or descriptions may be culturally sensitive and may be considered inappropriate today, but may have reflected the author's/creator's attitude or that of the period in which they were written.

The 1840 published studies relating to 20 of Rogers and Shoemaker's generalisations on the diffusion of innovations are meta-analysed by way of assumptions and simple techniques addressing sampling error. It is found that most of the discrepancy between studies supporting and not supporting these generalisations can be explained as statistical artifacts, and that there are likely to be correlations of order 0.20 between most independent variables and time of adoption. Such correlations are capable of improving our success rate in predicting earlier/later adopters to 60% (for one independent variable).

Skin inspection for evaluating the presence of risk indicators to developing pressure ulcers. Aline Arrais Sampaio Santos, Francisca; Fortes Vitor, Allyne; Ximenes Teixeira, Iane; Pereira de Melo, Renata; Veniçios de Oliveira Lopes, Marcos // Australian Journal of Advanced Nursing; Mar-May 2012, Vol. 29 Issue 3, p40
