Walkerdine V (1990)b) Post-Structuralism and Mathematics Education, In Noss, R , Brown, A , Drake, P , Dowling, P , Harris, M , Hoyles, C and Mellin-Olsen, S Eds (1990) Political Dimensions of Mathematics Education: Action and Critique (Proceedings of The First International Conference, April 1-4, (1990), London: University of London Institute of Education

Glaserfeld E Von (1992) A Constructivist Approach To Experimental Foundations of Mathematical Concepts In Hills, S , Ed , (1991) The History and Philosophy of Science In Science Education (Proceedings of The Second International Conference On The History and Philosophy of Science and Science Teaching), Volume 2, Kingston, Ontario: Queens University, 553-571

A decade or two ago there was a dearth of books either providing practical advice on carrying out educational research, or on the underlying theoretical issues (except from the perspective of the scientific research paradigm). These days the situation has been reversed, and there is a wealth of books available. Below, are listed a number of recent or classic references on educational research methodology which research students and other educational researchers have found useful. It is neither a complete list, nor should you necessarily feel the need to read all the books mentions: thus would be unrealistic. The references are arranged in three sections according to the type of use that you might make of them. )

This book is practical rather than philosophical, and it offers valuable treatments of the important issues of developing research questions and a research proposal, and the writing up a report or dissertation. It includes a number of other useful things, including the anti-sexist language guidelines from the British Sociological Association as an appendix.

This provides a well grounded introduction to ethnographic and qualitative research methods, located in the interpretative research paradigm. It discusses sociological and social science research, and is not specifically directed at education, but a number of educational researchers have found it to be of value.

There are a couple of series of monographs on educational research methods, which provide brief, sometimes penetrating accounts of specific research approaches and methods. These consist of several dozen specialist monographs. There are the University of Nottingham RediGuides to educational research. There are 32 in the series at last count, and they cover a whole range of single issues in educational research, for example: (2) Evaluating the literature, (7) Attitude Assessment, (15) Historical Research, (16) Researching into the Curriculum, (23) Writing Research Reports, (26) Case Study.

Sage publish two series of research approaches and methods, each including several dozen specialist monographs. One is on qualitative methods, and has some fascinating titles. Another is on quantitative methods, and covers particular statistical and data collection techniques (interviews, questionnaires, etc.). All of these are variable in quality, but some are excellent and can provide very useful details when you have a good idea of the type of research method you want to use.

This book provides a valuable resource for the philosophical and theoretical underpinnings of educational research methodology. It discusses sociological and philosophical theories in some depth, and provides a useful overview of the key ideas and issues in the context of doing social science research.

This book offers a valuable overview of modern philosophical schools and positions, explained briefly but not superficially, with good references at the end of each section for further reading. It treats Marxist philosophy and Critical Theory, Hermeneutics, Phenomenology, Structuralism post-structuralism, Logical philosophy, Realism and Empiricism, Wittgenstein's philosophy, Ordinary language philosophy, and Philosophy of Science.

According to the Foundation's website, "the fellowship is not a reward for past accomplishment, but rather an investment in a person's originality, insight, and potential." The current prize is \$625,000 paid over five years in quarterly installments. This figure was increased from \$500,000 in 2013 with

the release of a review of the MacArthur Fellows Program. As of 2007[update], the Program has awarded more than \$350 million to 756 recipients as young as 18 and as old as 82.[1] The award has been called "one of the most significant awards that is truly 'no strings attached.'"[2]

The Program has no application fee—an anonymous group nominates potential Fellows and recommends them to an anonymous selection committee of about a dozen people. The committee reviews all nominees and recommends recipients to the President and board of directors. Most new Fellows first learn of their nomination upon receiving a congratulatory phone call. MacArthur Fellow James Collins describes this experience in an editorial column of The New York Times.[3]

Weather, War and Mathematics, Review of The Forgiving Air: Understanding Environmental Change by Richard C.J. Somerville, The Collected Papers of Lewis Fry Richardson edited by Oliver M. Ashford et al., and Prophet or Professor? The Life and Work of Lewis Fry Richardson by Oliver M. Ashford, SIAM News, November 1996 (29:9)

Testing: One, Two, Three; Testing: One, . . . Can You Hear Me Back There? Review of Executive Summary, Third International Mathematics and Science Study (TIMSS). By William Schmidt; A TIMSS Primer: Lessons and Implications for U.S. Education. By Harold W. Stevenson; The Rationality and Irrationality of International Comparative Studies. By Christine Keitel and Jeremy Kilpatrick; and Tinkering with TIMSS. By Gerald W. Bracey, SIAM News, March 22, 1999

Review of Widmung, Welterklang und Wissenschaftslegitimisierung: Titelbilder und ihre Funktionen in der Wissenschaftlichen Revolution. [Dedications, Explanations of the World, and the Legitimization of Science: The Function of Title-Page Frontispieces During the Scientific Revolution.] By Volker Remmert, SIAM News, October 21, 2006
